Table of Contents

Overview **1**

1 Introduction 1
2 Basic design 2
3 Hardware systems 6
4 Schedule 10

1 Physics requirements **1-1**

1.1 Energy asymmetry 1-1
1.2 Luminosity 1-2
1.3 Energy range 1-3
1.4 Beam energy spread 1-4
1.5 Beam background 1-4

2 Machine Parameters **2-1**

2.1 Luminosity, tune shift, and beam intensity 2-1
2.2 Crossing angle 2-2
2.3 Bunch length 2-5
2.4 Bunch spacing 2-6
2.5 Emittance 2-7
2.6 Momentum spread and synchrotron tune 2-7
2.7 Other issues 2-8

3 Beam-Beam Interactions **3-1**

3.1 Introduction 3-1
3.2 Simulation of beam collision 3-2
3.3 Simulation with linear lattice functions 3-3
3.4 Simulation with the lattice which includes nonlinearity and errors 3-10
3.5 Quasi strong-strong simulation 3-13
3.6 Bunch tails excited by beam-beam interactions 3-15
3.7 Tail, luminosity and longitudinal tilt 3-17
3.8 Summary 3-19
3.9 Comments on parasitic crossing effects 3-21

4 RF Parameters **4-1**

4.1 Introduction 4-1
4.2 Requirements 4-2
4.3 Cavity-related instabilities 4-3
4.4 RF parameters 4-7

4.5 Summary 4-13

5 Impedance and Collective Effects 5-1
5.1 Impedance 5-1
5.2 Single-bunch collective effects 5-11
5.3 Coupled-bunch instabilities 5-12
5.4 Beam blow-up due to transient ion trapping in the electron ring 5-17
5.5 Instabilities due to beam-photoelectron interactions 5-23

6 Lattice Design 6-1
6.1 Dynamic aperture 6-1
6.2 Development of beam optics design 6-3
6.3 Optics design of the interaction region 6-13
6.4 Optics design of other straight sections 6-16
6.5 Requirements on the magnet quality 6-17
6.6 Effects of machine errors and tuning procedures 6-18
6.7 Conclusions 6-22

7 Interaction Region 7-1
7.1 Beam-line layout 7-1
7.2 Detector boundary conditions 7-4
7.3 Beam line aperture considerations 7-9
7.4 Superconducting magnets for IR 7-10
7.5 Special quadrupole magnets for IR 7-19
7.6 Installation and magnet support for IR 7-26
7.7 Beam background 7-28

8 RF System 8-1
8.1 Normal conducting cavity 8-1
8.2 Superconducting cavity 8-32
8.3 Low-level RF issues 8-43
8.4 Crab cavity 8-52

9 Magnet System 9-1
9.1 Magnets in the arc and straight sections 9-1
9.2 Magnet power supplies and cabling 9-15
9.3 Installation and alignment 9-18

10 Vacuum System 10-1
10.1 LER Vacuum system 10-1
10.2 HER Vacuum system 10-11

11 Beam Instrumentation **11-1**
11.1 Beam position monitor 11-1
11.2 Optical monitor 11-9
11.3 Laser wire monitor 11-19
11.4 Bunch feedback system 11-23

12 Injection **12-1**
12.1 Linac 12-1
12.2 Average Luminosity 12-24
12.3 Beam transport 12-27

13 Accelerator Control System **13-1**
13.1 System requirements 13-1
13.2 System architecture 13-5
